What is Meet4Eat?

Meet4Eat is

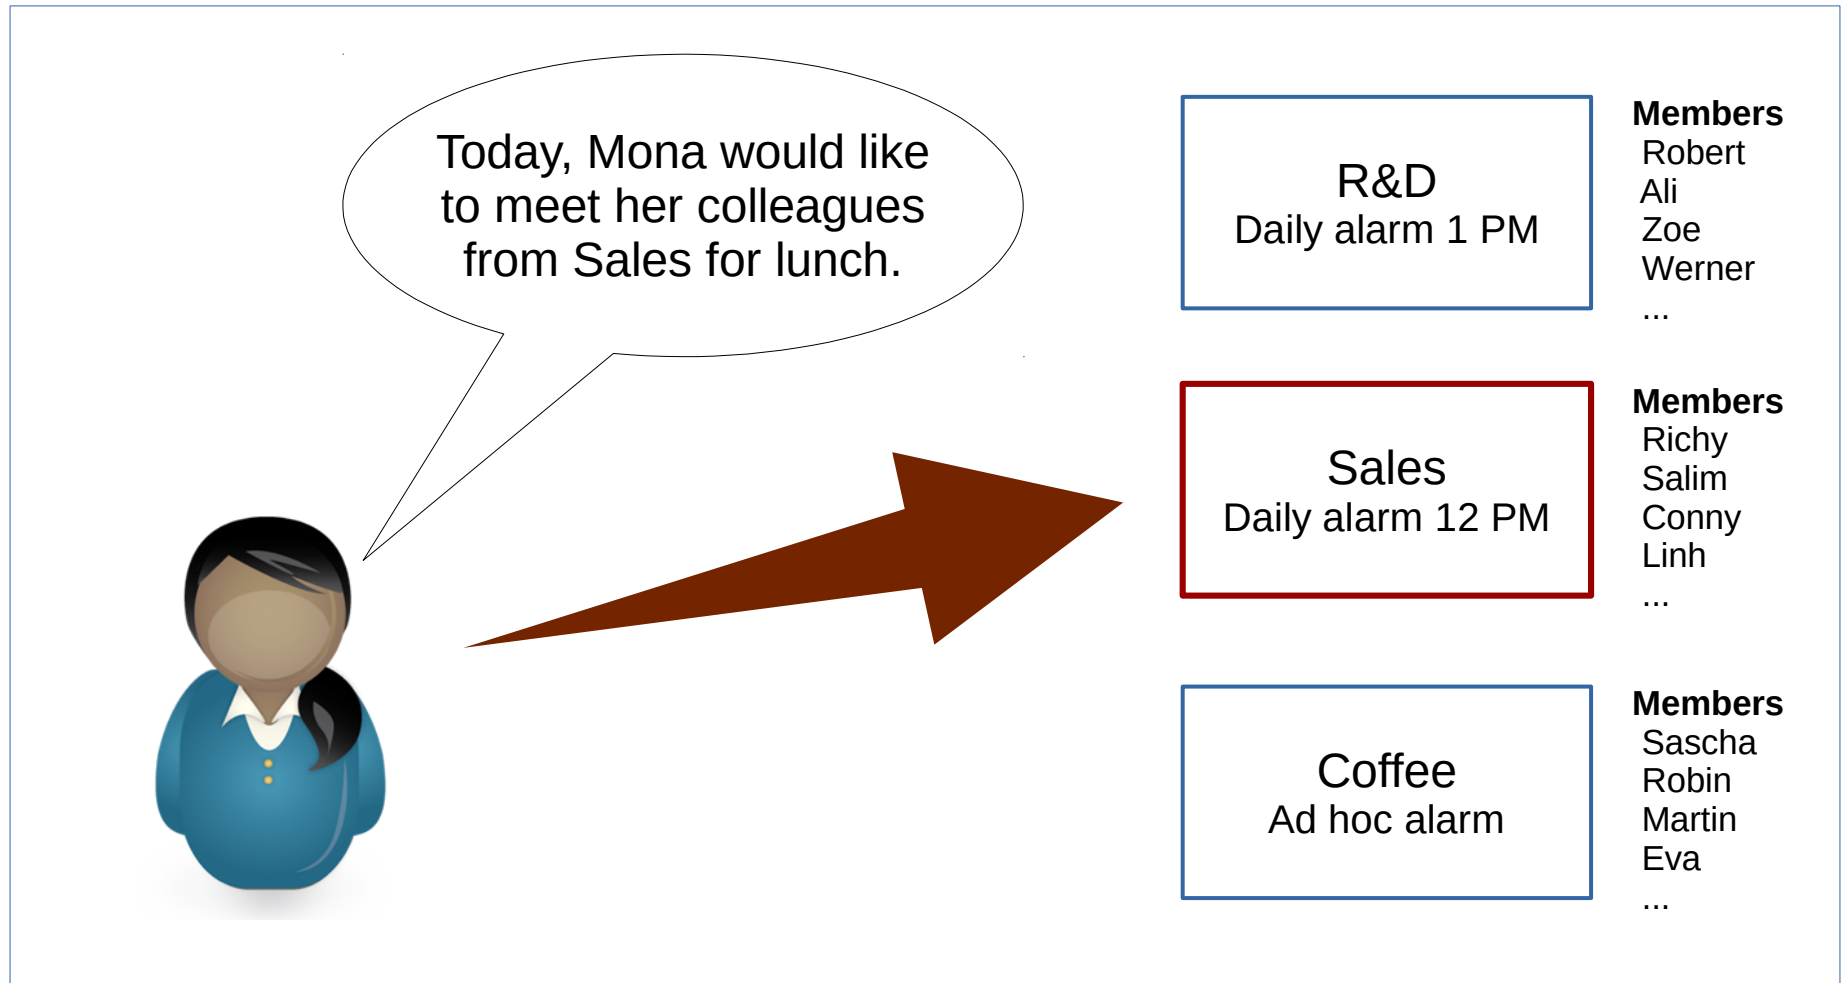

- a social collaboration tool helping to organize events for lunch, dinner, or other forms of gathering.
- supports periodic events, e.g. meeting your colleagues for lunch at work every day
- supports an event reminder (alarm) and voting for a location

Behind the Scenes

- A cloud based application: The functionality is spread over a central server and many clients.
- The server provides RESTful web services and JSON as exchange format.
- The Server is implemented by the means of Java EE and runs in Open Source glassfish.
- Clients can be implemented for various platforms (e.g. Qt App for PC/MacOS)

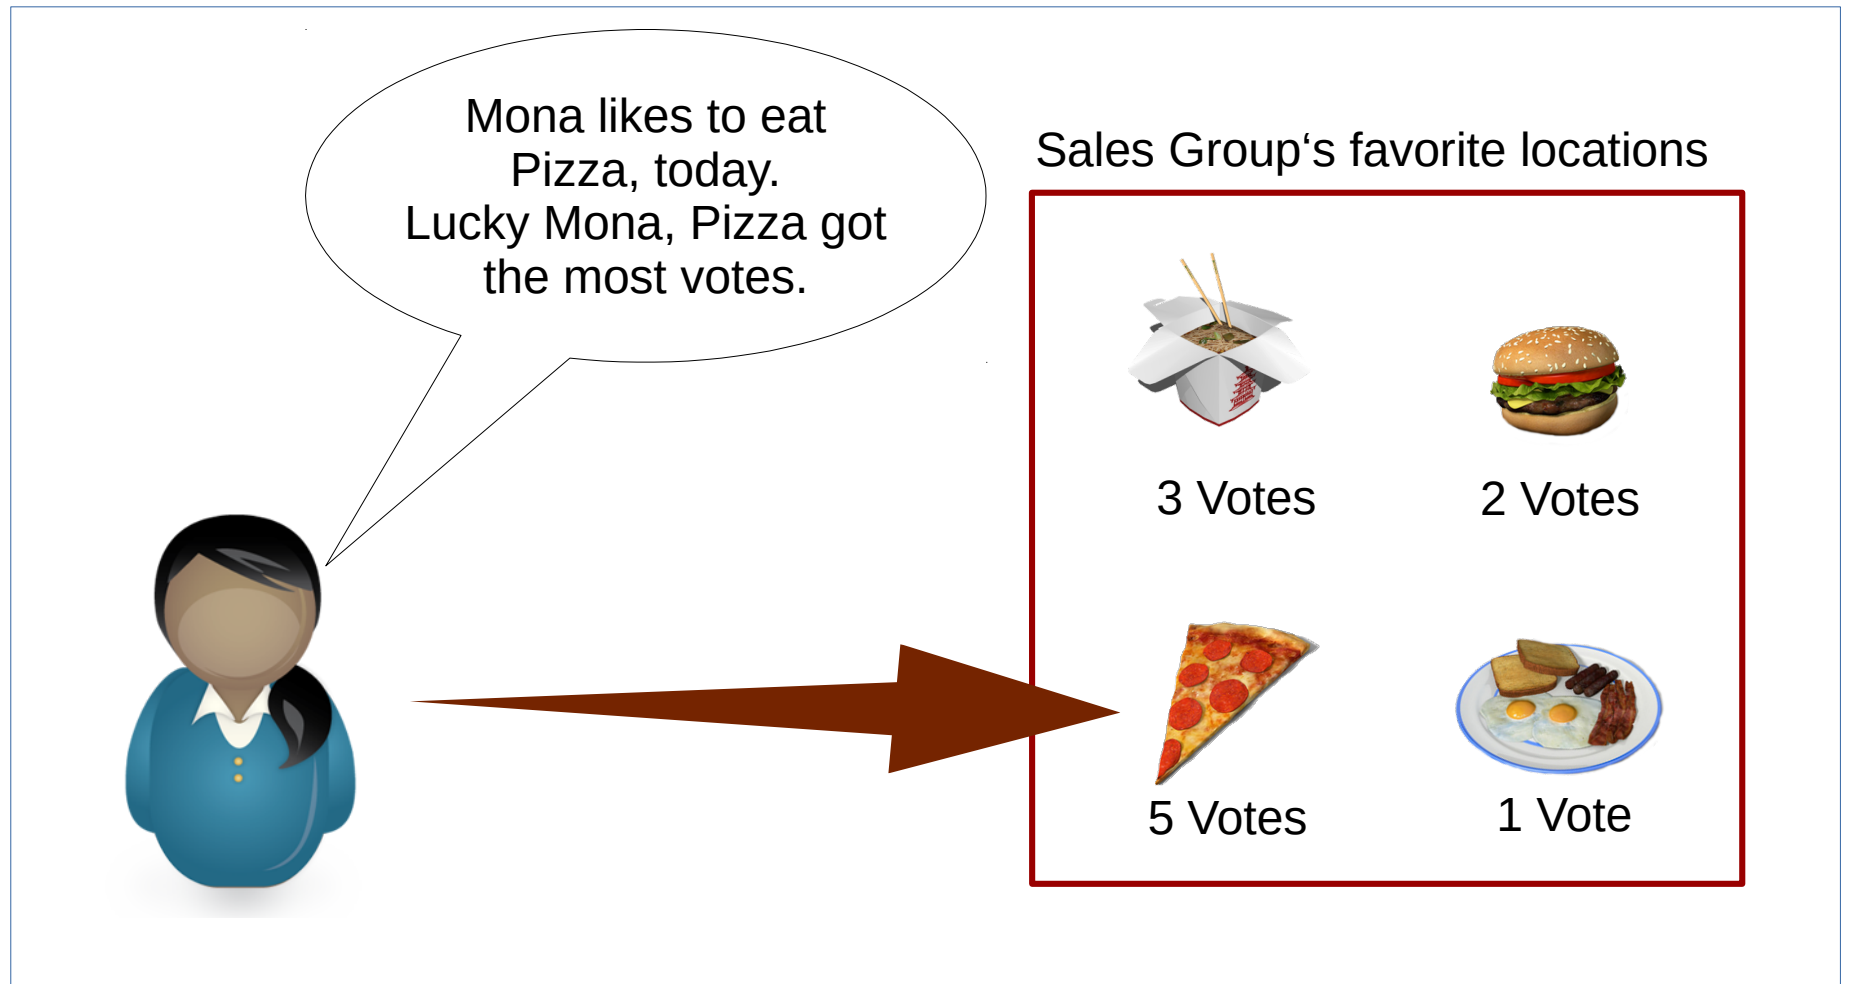

How it Works - an Example I

Mona's Colleagues Groups for Lunch

How it Works - an Example II

Mona is notified (alarm) short before 12 PM and votes for a location

How it Works - an Example III

Mona needs coffee now
